RWEP Program Overview

Santa Barbara County's Regional Water Efficiency Program (RWEP) was established by the Santa Barbara County Water Agency in December 1990 as a partnership among local water purveyors and the County. RWEP promotes the efficient use of urban and agricultural water supplies Countywide, and provides information and assistance to the eighteen local water purveyors within the County (see table on page 4). Through the RWEP, the County Water Agency coordinates cooperative water conservation efforts among purveyors, co-funds projects and programs, acts as a clearinghouse for information on water efficiency, manages specific projects and programs, and monitors local, state and national legislation related to efficient water use.

This annual report provides information on accomplishments of the RWEP as coordinated by the County. This report does not capture all water conservation activities or accomplishments of each individual water purveyor across the County.

Some local water purveyors, along with the County Water Agency, are members of the California Urban Water Conservation Council (CUWCC), and have signed a Memorandum of Understanding (MOU) committing to implement certain Best Management Practices (BMPs). This report identifies which RWEP accomplishments relate to specific BMPs under the MOU. For more information on CUWCC's reporting requirements, see the Council's website at www.cuwcc.org. Implementation of the RWEP also satisfies the U. S. Bureau of Reclamation's requirement for the County Water Agency, as USBR master contractor for the Cachuma Project, to have a regional water conservation plan as a supplement to individual water purveyors' water conservation plans.

For information on water conservation in Santa Barbara County, see our RWEP website at www.WaterWiseSB.org.
